iSpec

The **best-kept** secret in **procurement**

CASE STUDY

CIVMEC
Construction & Engineering

Highlights of the system:

- **Proper planning:**
  iSpec ensures proper planning and set up of a package (prompts for all technical and commercial documents, and the pricing schedule is built on the system) – unlimited upload of documents.

- **Automated evaluations:**
  Evaluation (and options) automated (with some manual review/interpretation), saving so much time during evaluation and comparing tenders, not just the prices, also compliance to specification and commercials. This stands out as a feature as it drives an apple-to-apple comparison, ensuring no scope item is overlooked.

- **All communications in one system:**
  All clarifications/TQ's/Addenda on one system - no more offline emails. So anyone accessing or taking a package over, will have all correspondence relating to the tender.

- **Live procurement schedule:**
  Serves as live procurement schedule (No manual updating an Excel spreadsheet….).

- **Analytics and project controls:**
  Great reporting tool, analytics at the press of a button. Has features for all project controls after award – GREAT features worth exploring. Can use for award and notifying unsuccessful bidders.

IN A NUTSHELL:

"Very impressed that there is no cost for such a quality system. Have tested many in the past and most do not cater as well as iSpec does for construction/engineering procurement."

Hannellie Neervoort
Group Manager
